

Real Dream Shasta Daisy

Leucanthemum x superbum 'Real Dream'

Height: 18 inches

Spread: 15 inches

Spacing: 12 inches

Sunlight: ☉ ●

Hardiness Zone: 4

Description:

An outstanding dwarf form producing elegant soft yellow semi-double blooms, that will mature to cream, with golden centers; a beautiful addition to the garden when massed; hardy and blooms throughout the summer

Ornamental Features

Real Dream Shasta Daisy has masses of beautiful buttery yellow daisy flowers with creamy white overtones and gold eyes at the ends of the stems from early to late summer, which are most effective when planted in groupings. The flowers are excellent for cutting. Its serrated narrow leaves remain dark green in color throughout the season.

Landscape Attributes

Real Dream Shasta Daisy is an herbaceous perennial with an upright spreading habit of growth. Its medium texture blends into the garden, but can always be balanced by a couple of finer or coarser plants for an effective composition.

This plant will require occasional maintenance and upkeep, and should be cut back in late fall in preparation for winter. It is a good choice for attracting butterflies to your yard. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Insects

Real Dream Shasta Daisy is recommended for the following landscape applications;

- Border Edging
- General Garden Use

Planting & Growing

Real Dream Shasta Daisy will grow to be about 16 inches tall at maturity, with a spread of 15 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 12 inches apart. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 5 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant does best in full sun to partial shade. It does best in average to evenly moist conditions, but will not tolerate standing water. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This particular variety is an interspecific hybrid. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.
