

Cologreen Juniper

Juniperus scopulorum 'Cologreen'

Height: 15 feet

Spread: 5 feet

Sunlight: ○

Hardiness Zone: 3

Other Names: Colorado Redcedar

Description:

A dense and narrowly columnar evergreen shrub with soft textured silvery-gray needle-like foliage and abundant showy blue berries, a good compact choice for varying the skyline in difficult landscape situations, makes a great tall evergreen hedge

Ornamental Features

Cologreen Juniper is a dwarf conifer which is primarily valued in the landscape for its decidedly oval form. It has dark green evergreen foliage. The scale-like sprays of foliage remain dark green throughout the winter.

Landscape Attributes

Cologreen Juniper is a dense multi-stemmed evergreen shrub with a shapely oval form. Its relatively fine texture sets it apart from other landscape plants with less refined foliage.

This is a relatively low maintenance shrub. When pruning is necessary, it is recommended to only trim back the new growth of the current season, other than to remove any dieback. It has no significant negative characteristics.

Cologreen Juniper is recommended for the following landscape applications;

- Accent
- Vertical Accent
- Hedges/Screening
- General Garden Use

Planting & Growing

Cologreen Juniper will grow to be about 15 feet tall at maturity, with a spread of 5 feet. It tends to fill out right to the ground and therefore doesn't necessarily require facer plants in front, and is suitable for planting under power lines. It grows at a medium rate, and under ideal conditions can be expected to live for 60 years or more.

This shrub should only be grown in full sunlight. It prefers dry to average moisture levels with very well-drained soil, and will often die in standing water. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This is a selection of a native North American species.
