

Cheyenne Common Privet *Ligustrum vulgare* 'Cheyenne'

Height: 8 feet

Spread: 6 feet

Sunlight: ☉ ●

Hardiness Zone: 4

Other Names: European Privet

Description:

A hardy large shrub for use in trimmed hedges, takes pruning exceptionally well; densely branched, interesting flowers (if not pruned) followed by black berries in fall; easy to grow, handles polluted city conditions well

Ornamental Features

Cheyenne Common Privet has panicles of lightly-scented white flowers hanging below the branches from late spring to early summer. It has dark green deciduous foliage. The glossy narrow leaves do not develop any appreciable fall color.

Landscape Attributes

Cheyenne Common Privet is a multi-stemmed deciduous shrub with an upright spreading habit of growth. Its relatively fine texture sets it apart from other landscape plants with less refined foliage.

This shrub will require occasional maintenance and upkeep, and can be pruned at anytime. It has no significant negative characteristics.

Cheyenne Common Privet is recommended for the following landscape applications;

- Hedges/Screening

Planting & Growing

Cheyenne Common Privet will grow to be about 8 feet tall at maturity, with a spread of 6 feet. It tends to be a little leggy, with a typical clearance of 1 foot from the ground, and is suitable for planting under power lines. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 30 years.

This shrub does best in full sun to partial shade. It prefers to grow in average to dry locations, and dislikes excessive moisture. It is not particular as to soil type or pH, and is able to handle environmental salt. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selected variety of a species not originally from North America.
