

Goodness Grows Speedwell

Veronica 'Goodness Grows'

Height: 12 inches

Spread: 18 inches

Spacing: 14 inches

Sunlight:

Hardiness Zone: 4

Description:

An extremely easy to grow and virtually maintenance-free variety, producing exciting blue-violet spiky flowers on a compact mound of fresh green foliage; makes an ideal small groundcover, great in rock gardens

Ornamental Features

Goodness Grows Speedwell has masses of beautiful spikes of blue flowers with violet overtones rising above the foliage from early to late summer, which are most effective when planted in groupings. Its glossy narrow leaves remain forest green in color throughout the year.

Landscape Attributes

Goodness Grows Speedwell is a dense herbaceous evergreen perennial with an upright spreading habit of growth. Its relatively fine texture sets it apart from other garden plants with less refined foliage.

This is a relatively low maintenance plant, and should only be pruned after flowering to avoid removing any of the current season's flowers. It is a good choice for attracting butterflies to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. It has no significant negative characteristics.

Goodness Grows Speedwell is recommended for the following landscape applications;

- Mass Planting
- Rock/Alpine Gardens
- Border Edging
- General Garden Use
- Groundcover

Planting & Growing

Goodness Grows Speedwell will grow to be about 10 inches tall at maturity, with a spread of 18 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 14 inches apart. Its foliage tends to remain low and dense right to the ground. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 8 years. As an evergreen perennial, this plant will typically keep its form and foliage year-round.

This plant does best in full sun to partial shade. It prefers dry to average moisture levels with very well-drained soil, and will often die in standing water. It is not particular as to soil pH, but grows best in sandy soils, and is able to handle environmental salt. It is highly tolerant of urban pollution and will even thrive in inner city environments. This particular variety is an interspecific hybrid. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.
