

## Eveline Speedwell

*Veronica longifolia 'Eveline'*

Plant Height: 8 inches

Flower Height: 20 inches

Spread: 15 inches

Spacing: 12 inches

Sunlight:

Hardiness Zone: 4

Other Names: Longleaf Speedwell

### Ornamental Features

Eveline Speedwell has masses of beautiful spikes of purple flowers rising above the foliage from mid summer to early fall, which are most effective when planted in groupings. The flowers are excellent for cutting. Its narrow leaves are emerald green in color. As an added bonus, the foliage turns a gorgeous deep purple in the fall.

### Landscape Attributes

Eveline Speedwell is a dense herbaceous perennial with an upright spreading habit of growth. Its medium texture blends into the garden, but can always be balanced by a couple of finer or coarser plants for an effective composition.

This plant will require occasional maintenance and upkeep, and is best cleaned up in early spring before it resumes active growth for the season. It is a good choice for attracting butterflies to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. It has no significant negative characteristics.

Eveline Speedwell is recommended for the following landscape applications;

- Mass Planting
- Border Edging
- General Garden Use

## Planting & Growing

Eveline Speedwell will grow to be about 8 inches tall at maturity extending to 20 inches tall with the flowers, with a spread of 15 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 12 inches apart. Its foliage tends to remain low and dense right to the ground. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 10 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant does best in full sun to partial shade. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selected variety of a species not originally from North America. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.
