

Carol Mackie Daphne

Daphne x burkwoodii 'Carol Mackie'

Height: 3 feet

Spread: 4 feet

Sunlight:

Hardiness Zone: 4

Description:

A superb garden shrub featuring extremely fragrant light pink flowers in spring and delicately variegated foliage; the fragrance is intoxicating; very finicky plant, needing light shade and well-drained soil; never move once established

Ornamental Features

Carol Mackie Daphne features showy clusters of fragrant shell pink tubular flowers at the ends of the branches in mid spring, which emerge from distinctive pink flower buds. It has attractive creamy white-variegated green foliage. The narrow leaves are highly ornamental and remain green throughout the winter.

Landscape Attributes

Carol Mackie Daphne is a multi-stemmed evergreen shrub with an upright spreading habit of growth. Its relatively fine texture sets it apart from other landscape plants with less refined foliage.

This is a relatively low maintenance shrub, and should not require much pruning, except when necessary, such as to remove dieback. It has no significant negative characteristics.

Carol Mackie Daphne is recommended for the following landscape applications;

- Mass Planting
- Border Edging
- General Garden Use

Planting & Growing

Carol Mackie Daphne will grow to be about 3 feet tall at maturity, with a spread of 4 feet. It tends to fill out right to the ground and therefore doesn't necessarily require facer plants in front. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 20 years.

This shrub does best in full sun to partial shade. It prefers dry to average moisture levels with very well-drained soil, and will often die in standing water. It is not particular as to soil pH, but grows best in clay soils. It is somewhat tolerant of urban pollution, and will benefit from being planted in a relatively sheltered location. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This particular variety is an interspecific hybrid, and parts of it are known to be toxic to humans and animals, so care should be exercised in planting it around children and pets.
