

## **Skyrocket Juniper** *Juniperus scopulorum 'Skyrocket'*

Height: 15 feet

Spread: 30 inches

Sunlight: ○

Hardiness Zone: 4

Other Names: Colorado Redcedar

### **Description:**

An extremely narrow, rigid tall evergreen shrub, with soft blue-green needle-like foliage all season long; use with caution, can be rather abrupt in the landscape, makes a curious, almost formal tall evergreen hedge when planted in a row

### **Ornamental Features**

Skyrocket Juniper is a dwarf conifer which is primarily valued in the landscape for its rigidly columnar form. It has attractive powder blue evergreen foliage. The scale-like sprays of foliage are highly ornamental and remain powder blue throughout the winter. It produces silvery blue berries from late spring to late winter.

### **Landscape Attributes**

Skyrocket Juniper is a multi-stemmed evergreen shrub with a narrowly upright and columnar growth habit. Its relatively fine texture sets it apart from other landscape plants with less refined foliage.

This is a relatively low maintenance shrub, and is best pruned in late winter once the threat of extreme cold has passed. It has no significant negative characteristics.

Skyrocket Juniper is recommended for the following landscape applications;

- Accent
- Vertical Accent
- General Garden Use

### **Planting & Growing**

Skyrocket Juniper will grow to be about 15 feet tall at maturity, with a spread of 30 inches. It tends to be a little leggy, with a typical clearance of 2 feet from the ground, and is suitable for planting under power lines. It grows at a medium rate, and under ideal conditions can be expected to live for 70 years or more.

This shrub should only be grown in full sunlight. It prefers dry to average moisture levels with very well-drained soil, and will often die in standing water. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This is a selection of a native North American species.
