Macintosh Apple

Malus 'Macintosh'

Height: 15 feet

Spread: 15 feet

Sunlight: ○

Hardiness Zone: 4

Description:

One of the most famous hardy red apples, excellent for cooking, keeps well; eating apples are high maintenance and need a second pollinator; the perfect combination of accent and fruit tree, very hardy, needs well-drained soil and full sun

Edible Qualities

Macintosh Apple is a small tree that is commonly grown for its edible qualities. It produces red round apples (which are botanically known as 'pomes') with hints of light green and white flesh which are usually ready for picking from early to mid fall. The apples have a tart taste and a crisp texture.

The apples are most often used in the following ways:

- Fresh Eating
- Cooking
- Baking
- Sauces

Features & Attributes

Macintosh Apple features showy clusters of lightly-scented white flowers with shell pink overtones along the branches from mid to mid spring, which emerge from distinctive pink flower buds before the leaves. It has forest green deciduous foliage. The pointy leaves turn yellow in fall. The fruits are showy red apples with hints of light green, which are carried in abundance from late summer to late summer. The fruit can be messy if allowed to drop on the lawn or walkways, and may require occasional clean-up.

This is a deciduous tree with a more or less rounded form. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition. This is a high maintenance plant that will require regular care and upkeep, and is best pruned in late winter once the threat of extreme cold has passed. It is a good choice for attracting birds and bees to your yard. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Messy
- Disease

Aside from its primary use as an edible, Macintosh Apple is sutiable for the following landscape applications;

- Accent
- Shade
- General Garden Use
- Orchard/Edible Landscaping
- Topiary

Planting & Growing

Macintosh Apple will grow to be about 15 feet tall at maturity, with a spread of 15 feet. It has a low canopy with a typical clearance of 3 feet from the ground, and is suitable for planting under power lines. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 30 years. This variety requires a different selection of the same species growing nearby in order to set fruit.

This tree is typically grown in a designated area of the yard because of its mature size and spread. It should only be grown in full sunlight. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This particular variety is an interspecific hybrid.

Important Pruning Information

Apples should only be pruned when dormant to reduce the risk of spreading bacterial infection. Fireblight can be a problem on apples. Please consult our nursery staff for more information on management practices.
