Plant Height: 10 inches

Flower Height: 20 inches

Spread: 24 inches

Spacing: 20 inches

Sunlight: ○

Hardiness Zone: 4

Other Names: Scabious

Group/Class: Fama Series

Description:

This is by far, the largest flowering variety producing stunning blue double blooms on wiry stems above fine, ferny, cutleaf foliage; begins blooming in early summer and may continue into fall; a spectacular show for a sunny garden; deadhead spent flowers

Ornamental Features

Fama Deep Blue Pincushion Flower features unusual double blue pincushion flowers with creamy white eyes at the ends of the stems from early summer to early fall. The flowers are excellent for cutting. Its deeply cut ferny leaves remain dark green in color throughout the season.

Landscape Attributes

Fama Deep Blue Pincushion Flower is an herbaceous perennial with tall flower stalks held atop a low mound of foliage. It brings an extremely fine and delicate texture to the garden composition and should be used to full effect.

This is a relatively low maintenance plant, and should be cut back in late fall in preparation for winter. It is a good choice for attracting bees and butterflies to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. It has no significant negative characteristics.

Fama Deep Blue Pincushion Flower is recommended for the following landscape applications;

- Mass Planting
- General Garden Use

Planting & Growing

Fama Deep Blue Pincushion Flower will grow to be about 10 inches tall at maturity extending to 20 inches tall with the flowers, with a spread of 24 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 20 inches apart. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 10 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant should only be grown in full sunlight. It prefers to grow in average to dry locations, and dislikes excessive moisture. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selected variety of a species not originally from North America. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.
