Plant Height: 10 inches

Flower Height: 15 inches

Spread: 12 inches

Spacing: 8 inches

Sunlight: ○ ◐

Hardiness Zone: 4

Other Names: Beardtongue

Description:

A pretty variety with a compact habit; lovely pink flowers with white throats, rising above green foliage makes a beautiful visual impact when massed in the garden, along walkways, or in borders

Ornamental Features

Carolyn's Hope Beard Tongue has masses of beautiful spikes of pink tubular flowers with white throats rising above the foliage from early to late summer, which are most effective when planted in groupings. The flowers are excellent for cutting. Its narrow leaves remain grayish green in color throughout the season.

Landscape Attributes

Carolyn's Hope Beard Tongue is an herbaceous perennial with an upright spreading habit of growth. Its relatively fine texture sets it apart from other garden plants with less refined foliage.

This is a relatively low maintenance plant, and is best cleaned up in early spring before it resumes active growth for the season. It is a good choice for attracting butterflies and hummingbirds to your yard. It has no significant negative characteristics.

Carolyn's Hope Beard Tongue is recommended for the following landscape applications;

- Mass Planting
- Border Edging
- General Garden Use
- Container Planting

Planting & Growing

Carolyn's Hope Beard Tongue will grow to be about 10 inches tall at maturity extending to 15 inches tall with the flowers, with a spread of 12 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 8 inches apart. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 10 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant does best in full sun to partial shade. It prefers dry to average moisture levels with very well-drained soil, and will often die in standing water. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This particular variety is an interspecific hybrid. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.

Carolyn's Hope Beard Tongue is a fine choice for the garden, but it is also a good selection for planting in outdoor pots and containers. It is often used as a 'filler' in the 'spiller-thriller-filler' container combination, providing a mass of flowers against which the larger thriller plants stand out. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.

Note:

Carolyn's Hope Penstemon was developed in Colorado to raise funds to support breast cancer research at the University of Colorado Cancer Center.
