Height: 6 feet

Spread: 4 feet

Sunlight: ○

Hardiness Zone: 2

Other Names: Manchurian Lilac

Description:

An attractive, garden accent tree featuring showy panicles of light lavender-pink flowers in spring and crinkled foliage, impressive fall color for a lilac; blooms retain color and do not fade to white; fragrance is overwhelmingly spicy

Ornamental Features

Baby Kim Lilac (tree form) is covered in stunning panicles of fragrant lavender flowers with pink overtones rising above the foliage in late spring. The flowers are excellent for cutting. It has dark green deciduous foliage. The pointy leaves turn an outstanding deep purple in the fall.

Landscape Attributes

Baby Kim Lilac (tree form) is a dense deciduous dwarf tree, selected and trained to grow in a small tree-like form with the primary plant grafted high atop a standard. Its relatively coarse texture can be used to stand it apart from other landscape plants with finer foliage.

This is a relatively low maintenance dwarf tree, and should only be pruned after flowering to avoid removing any of the current season's flowers. It is a good choice for attracting butterflies to your yard. It has no significant negative characteristics.

Baby Kim Lilac (tree form) is ideal for use as a garden accent or patio feature, and is recommended for the following landscape applications;

- Accent
- General Garden Use

Planting & Growing

Baby Kim Lilac (tree form) will grow to be about 6 feet tall at maturity, with a spread of 4 feet. It tends to be a little leggy, with a typical clearance of 3 feet from the ground, and is suitable for planting under power lines. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 30 years.

This dwarf tree should only be grown in full sunlight. It is very adaptable to both dry and moist locations, and should do just fine under average home landscape conditions. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This particular variety is an interspecific hybrid.
