Description:

This variety has beautiful oval, bluish green foliage that is edged in silver; short spiked pale pink flowers bloom from May through July and make it a wonderful ground cover; vigourous and fast growing, spread may need to be controlled

Ornamental Features

Orchid Frost Spotted Dead Nettle has masses of beautiful spikes of shell pink flowers rising above the foliage from mid spring to late summer, which are most effective when planted in groupings. Its attractive oval leaves remain bluish-green in color with distinctive silver edges throughout the season.

Landscape Attributes

Orchid Frost Spotted Dead Nettle is a dense herbaceous perennial with a ground-hugging habit of growth. Its relatively fine texture sets it apart from other garden plants with less refined foliage.

This plant will require occasional maintenance and upkeep, and can be pruned at anytime. It is a good choice for attracting butterflies to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Spreading

Orchid Frost Spotted Dead Nettle is recommended for the following landscape applications;

- Shade
- Mass Planting
- Border Edging
- General Garden Use
- Groundcover

Planting & Growing

Orchid Frost Spotted Dead Nettle will grow to be only 6 inches tall at maturity extending to 8 inches tall with the flowers, with a spread of 24 inches. Its foliage tends to remain low and dense right to the ground. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 10 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant does best in partial shade to shade. It is an amazingly adaptable plant, tolerating both dry conditions and even some standing water. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selected variety of a species not originally from North America. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.
