Description:

A lovely and unique Hosta presenting long, blue-green and cream twisted foliage; a shade loving, mounded variety, perfect for garden beds, borders and containers; lavender flower spikes appear in early summer; low maintenance and easy to grow

Ornamental Features

Regal Twist Hosta is primarily valued in the garden for its distinctive form, with the flower stalks towering over the foliage. It features dainty spikes of lavender tubular flowers rising above the foliage in early summer. Its attractive twisted sword-like leaves remain bluish-green in color with showy creamy white variegation and tinges of powder blue throughout the season.

Landscape Attributes

Regal Twist Hosta is an herbaceous perennial with tall flower stalks held atop a low mound of foliage. Its medium texture blends into the garden, but can always be balanced by a couple of finer or coarser plants for an effective composition.

This is a relatively low maintenance plant, and is best cleaned up in early spring before it resumes active growth for the season. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Insects

Regal Twist Hosta is recommended for the following landscape applications;

- Mass Planting
- Border Edging
- General Garden Use
- Groundcover

Planting & Growing

Regal Twist Hosta will grow to be about 12 inches tall at maturity extending to 18 inches tall with the flowers, with a spread of 18 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 15 inches apart. Its foliage tends to remain dense right to the ground, not requiring facer plants in front. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 10 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant does best in partial shade to shade. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This particular variety is an interspecific hybrid. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.
