

Singleleaf Pinyon Pine

Pinus monophylla

Height: 25 feet

Spread: 20 feet

Sunlight: ○

Hardiness Zone: 4

Other Names: Single-leaf Pinyon Pine

Description:

A small tree, often with several twisted trunks, low branching and a broad crown; single needles on stout branches are gray green, slightly curved and sharp-tipped; an excellent screen plant

Ornamental Features

Singleleaf Pinyon Pine is primarily valued in the landscape for its ornamental upright and spreading habit of growth. It has attractive grayish green evergreen foliage. The needles are highly ornamental and remain grayish green throughout the winter.

Landscape Attributes

Singleleaf Pinyon Pine is a multi-stemmed evergreen tree with an upright spreading habit of growth. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This is a relatively low maintenance tree. When pruning is necessary, it is recommended to only trim back the new growth of the current season, other than to remove any dieback. It has no significant negative characteristics.

Singleleaf Pinyon Pine is recommended for the following landscape applications;

- Accent
- Shade
- Hedges/Screening
- Rock/Alpine Gardens

Planting & Growing

Singleleaf Pinyon Pine will grow to be about 25 feet tall at maturity, with a spread of 20 feet. It has a low canopy, and should not be planted underneath power lines. It grows at a slow rate, and under ideal conditions can be expected to live for 80 years or more.

This tree should only be grown in full sunlight. It prefers dry to average moisture levels with very well-drained soil, and will often die in standing water. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This species is native to parts of North America.
